The Battery Pass State of Play

May 2024

DISCLAIMER

This document (the “Document”) is for informational purposes only and is being made available to you by the Battery Pass consortium.

This Document is published by the Battery Pass consortium and contains information that has been or may have been provided by a number of sources. The findings, interpretations and conclusions expressed herein are a result of a collaborative process facilitated and endorsed by the Battery Pass consortium. The Battery Pass consortium partners (the partners as set out on slide 11 of this Document) endorse the overall project approach and findings and the Battery Pass consortium has made efforts to accurately capture stakeholder positions set out by organisations (including supporting partners and further experts), although the results may not necessarily represent the views of all individuals or the organisations they represent. The Battery Pass consortium has not separately verified the information provided from outside sources and cannot take responsibility if any of these statements misrepresent a stakeholder position or if positions evolve over time.

To the extent permitted by law, nothing contained herein shall constitute any representation or warranty and no responsibility or liability is accepted by the Battery Pass consortium as to the accuracy or completeness of any information supplied herein. Recipients of this Document are advised to perform independent verification of information and conduct their own analysis in relation to any of the material set out.

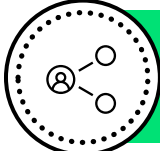

The statements contained herein are made as at the date of the Document. The Battery Pass consortium or any member, employee, counsel, officer, director, representative, agent or affiliate of the Battery Pass consortium does not have any obligation to update or otherwise revise any statements reflecting circumstances arising after the date of this Document.

This Document shall not be treated as tax, regulatory, accounting, legal, investment or any other advice in relation to the recipient of this information and this information should not and cannot be relied upon as such.

If you are in any doubt about the potential purpose to which this communication relates you should consult an authorised person who specialises in advising on business to which it relates.

The Battery Passport and the EU Battery Regulation

The EU introduces digital product passports (DPP) as part of its broader regulatory ambition towards sustainability with the first being required for batteries from 2027

European Green Deal

Comprehensive plan to make the EU climate-neutral by 2050, safeguard biodiversity, establish a circular economy and eliminate pollution, while boosting the competitiveness of the European industry and ensuring a just transition for the regions and workers affected.

Circular Economy Action Plan

Initiative promoting the sustainable use of resources, especially in resource-intensive sectors with high environmental impact.

Provisional agreement

Ecodesign for Sustainable Product Regulation

- Proposed in Mar 2022, as central part to the Commission's strategy for eco-friendly and circular products
- Extends beyond current Ecodesign Directive, which exclusively addresses energy-related products
- Aims to promote environmental sustainability across a broader range of products

Introduces **digital product passports** as a general concept

Entered into force

Battery Regulation

- Initially proposed in 2020 complementing the Strategic Action Plan for Batteries
- Entered into force in Aug 2023 replacing the EU Battery Directive
- Provides a legal framework aiming to promote sustainability, circularity, safety and transparency

Mandates a **battery passport** for all EV, LMT, and industrial (>2kWh) batteries starting Feb 2027

Proposal

End-of-Life Vehicle Regulation

- Proposed in Jul 2023, as result of the review of the End-of-life Vehicle Directive
- Will replace the End-of-life Vehicle Directive as well as the Type-approval Directive
- Governs the entire vehicle lifecycle, from design to end-of-life treatment

Mandates a **circularity vehicle passport** starting 7 years after entry into force of the regulation

The purpose of the battery passport is to provide transparency and awareness, enable the shift to a circular economy, and create a level playing field

Purpose of the battery passport

**Enable the shift
from linear to
circular economies**

- Provide the required “situational awareness” for batteries including, for example a “product-as-a-service” mode, instead of considering a product a consumable only
- Keep products within the system to save resources and minimize the amount of actual waste
- Leverage data for optimizing circularity processes

**Provide
transparency to
impact decisions**

- Enable informed decisions based on comprehensive data being provided digitally
- Bridge information gaps in the battery value chain to maximize lifetime value
- Leverage new insights from use and fate for design and production

**Create a battery
level playing field**

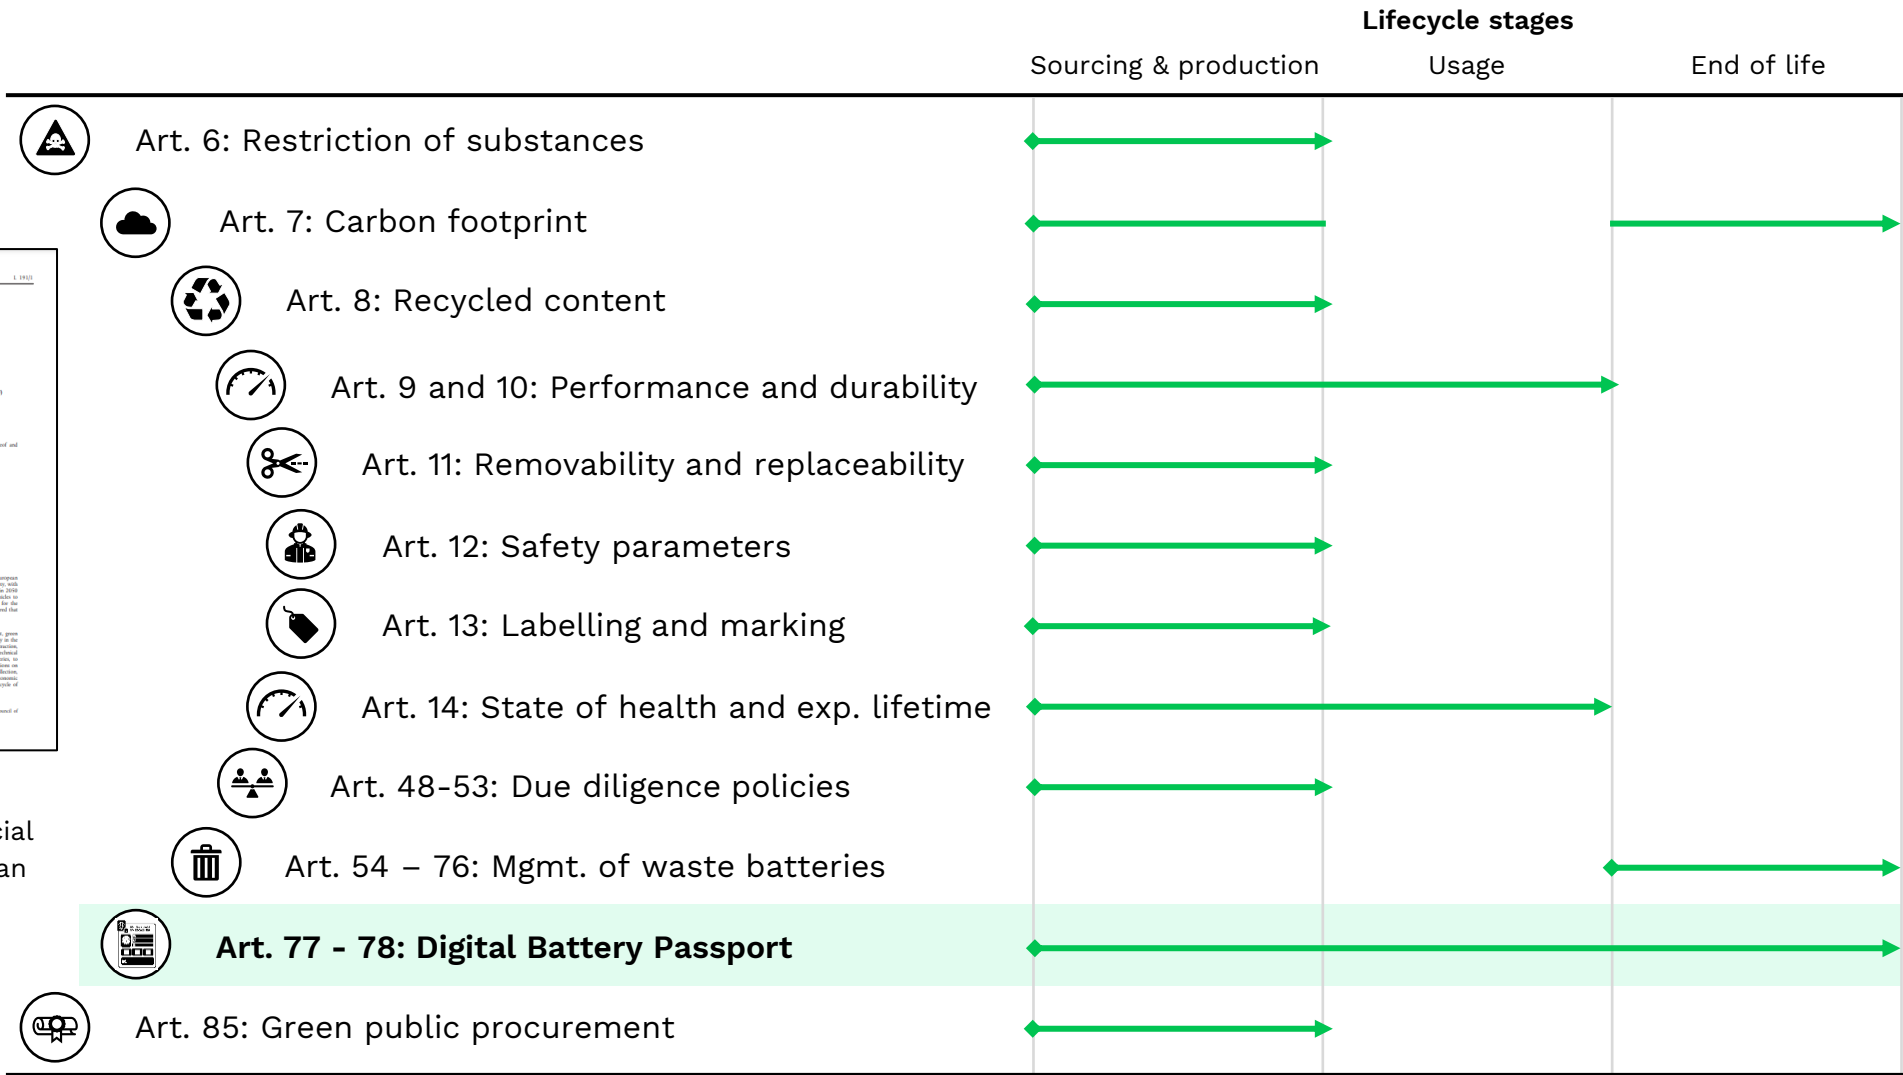

- Build the future battery value chain on multi-stakeholder responsibilities
- Move stakeholders to compete on sustainable innovation
- Develop business models that operate on value creation, value capture, and value conservation

The Battery Passport is defined in Article 77 of the Battery Regulation and encompasses reporting requirements covering the entire battery life cycle

Not exhaustive

Battery Regulation
publication in the Official
Journal of the European
Commission

The battery passport will be required for EV, LMT and industrial batteries > 2 kWh from February 2027 with the main responsibility lying with the “economic operator”

Specifications for the battery passport

Timeline

The battery passport will be required from 18 February 2027

Scope

- Batteries in light means of transport (LMT)
- Industrial batteries with a capacity greater than 2 kWh
- Electric vehicle (EV) batteries

Responsibility

The responsibility lies with the economic operator (or an authorized representative) placing the battery on the market

Stakeholder Groups

- 1) The “general public”
- 2) “Notified bodies, market surveillance authorities and the Commission”
- 3) “Any natural or legal person with a legitimate interest in accessing and processing that information”

The scope of information to be made available via the battery passport is extensive with up to 90 data attributes which can be clustered into seven categories

Not exhaustive

Data categories for the battery passport (select data attributes shown below)

Battery ID: 0101010

Battery passport ID: 1111010

Responsible economic operator

General information

- Manufacturing info (identity, place, date)
- Battery category
- Battery weight
- Battery status

Labels and certifications¹

- Symbols and labels
- Meaning of labels & symbols
- Declaration of conformity
- Compliance of test results

Carbon footprint

- Carbon footprint (5 metrics)
- Weblink to CF study
- CF performance class

Supply chain due diligence

- Due diligence report

Materials and composition

- Hazardous substances
- Battery chemistry
- Critical raw materials
- Materials used in cathode, anode, electrolyte

Circularity & resource efficiency

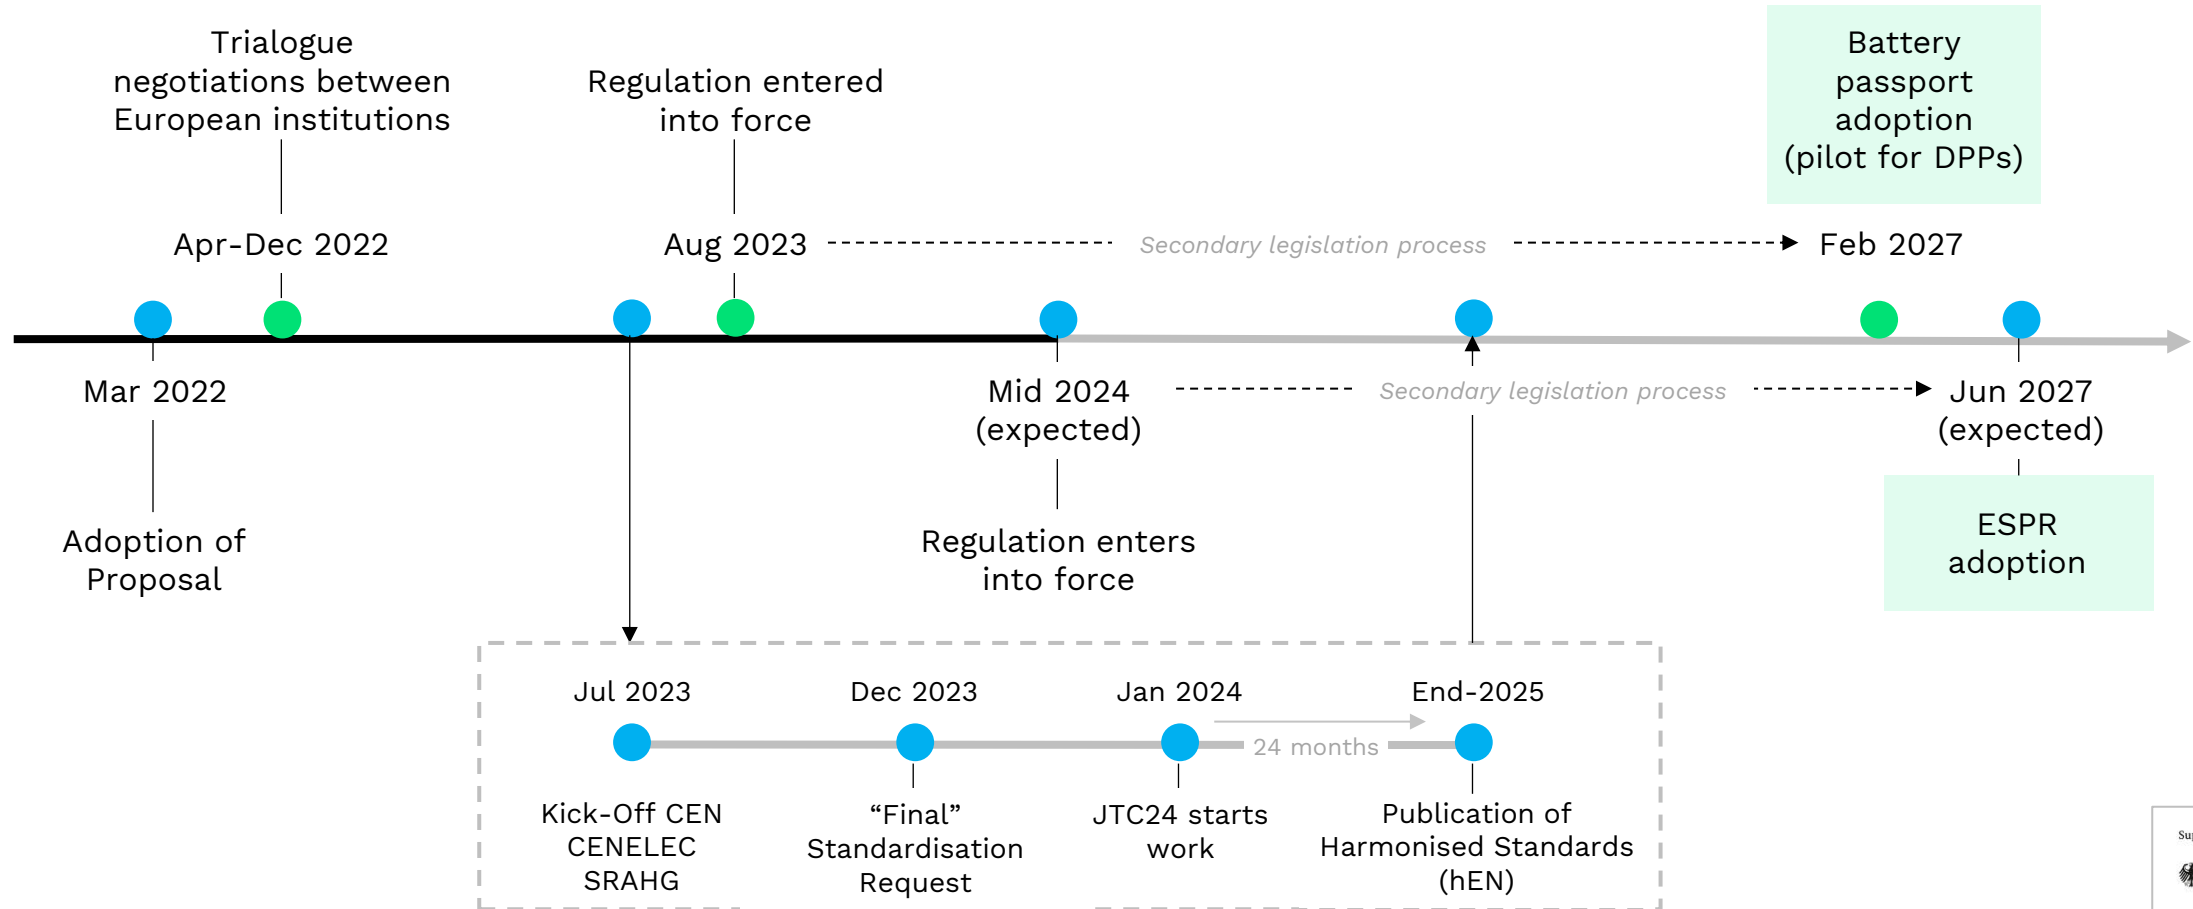

- Recycled content shares
- Manuals for removal, disassembly, dismantling
- Component part numbers & spare parts information
- Safety measures/instructions

Performance & durability

- Capacity, energy, power, SoH
- Expected lifetime
- Negative events

The regulatory frameworks for the battery passport are the EU Battery Regulation and Ecodesign for Sustainable Products Regulation (ESPR)

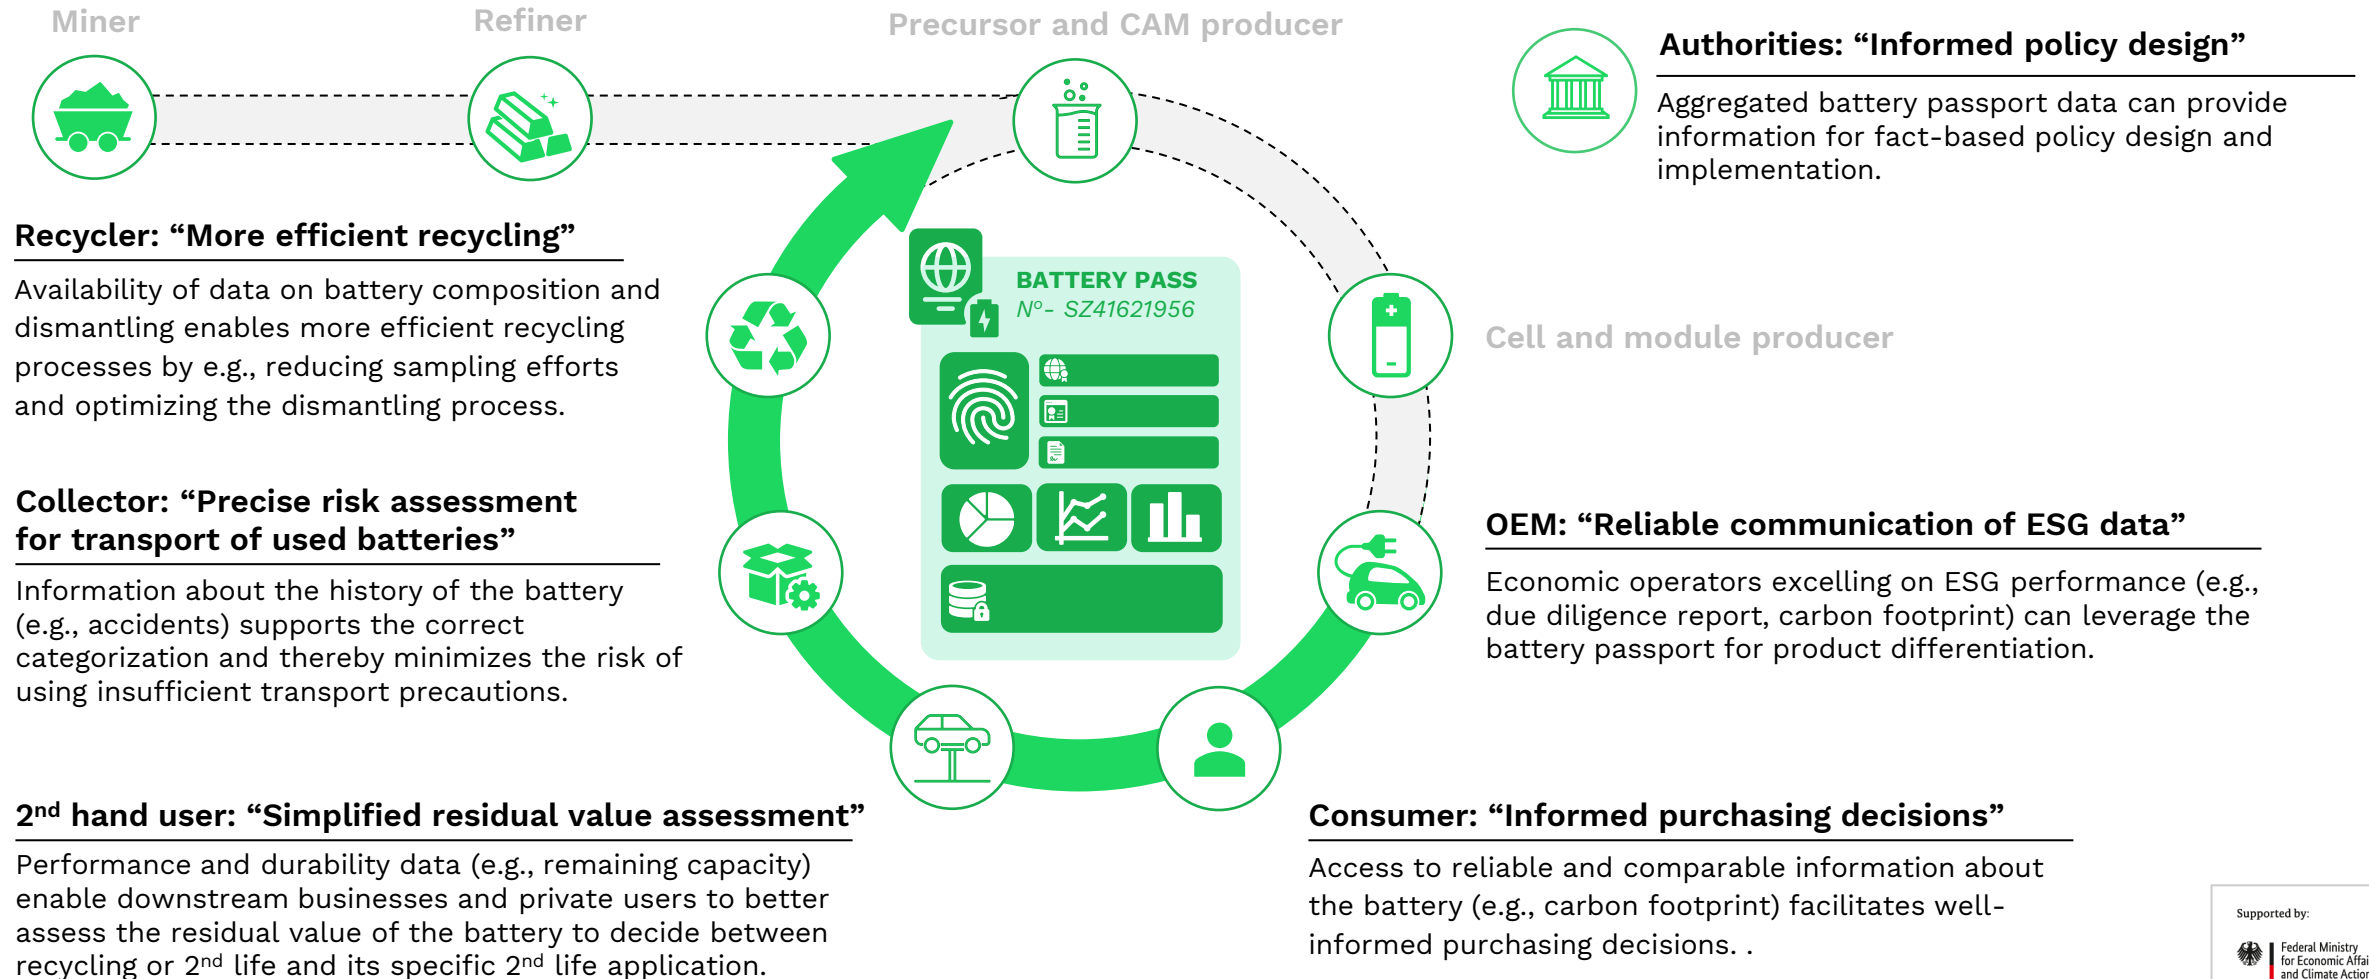

● Battery Regulation ● Ecodesign for Sustainable Products Regulation (ESPR) [] Standardization process

The battery passport will unlock major value along the value chain

Value of the passport:  Regulatory compliance and potential additional value pending conditions beyond regulatory requirements
 Direct value add along several dimensions (environmental, social and economic)

Select examples

The Battery Pass Consortium

The Battery Pass is a consortium of 11 partners from industry, science, technology and beyond, co-funded by BMWK aiming to provide guidance on the EU battery passport

Key facts on the Battery Pass Consortium

- Evolved from the Circular Economy Initiative Germany (CEID)
- 11 consortium partners from industry, science, technology and beyond
- Co-funded by the German Federal Ministry for Economic Affairs and Climate Action (BMWK) with EUR 8.2 mn
- Aiming to advance the implementation of and provide guidance on the EU Battery Passport
- Five work packages including:
 - Project coordination and stakeholder engagement
 - Guidance on content requirements
 - Guidance on technical battery passport system
 - Development of a physical and software demonstrator
 - Value assessment of individual use cases and overall
- 3-year timeframe from April 2022 to April 2025

Supported by:

on the basis of a decision
by the German Bundestag

The Battery Pass supports and collaborates with other major initiatives active in the digital product passport space

- European Commission “Digital-2021-Trust-01-DIGIPASS” winner
- Kicked off in October 2022 lasting 18 months (March 2024)
- Funding volume: EUR 2 mn
- Partners: 31 organisations
- Objective: build a common understanding of a cross-sectoral DPP
- Focus: Batteries, Textiles, Electronics

- Leading global voluntary passport initiative
- Objective: enabling transparency and accountability for risks and ESG impacts in EV battery value chains by creating a digital twin of the battery and aggregating data in a battery passport
- 3 early-stage proof of concepts were launched at WEF 2023
- Release of first set of ESG metrics (GHG Rulebook, Child Labour and Human Rights Indices) with additional metrics to follow

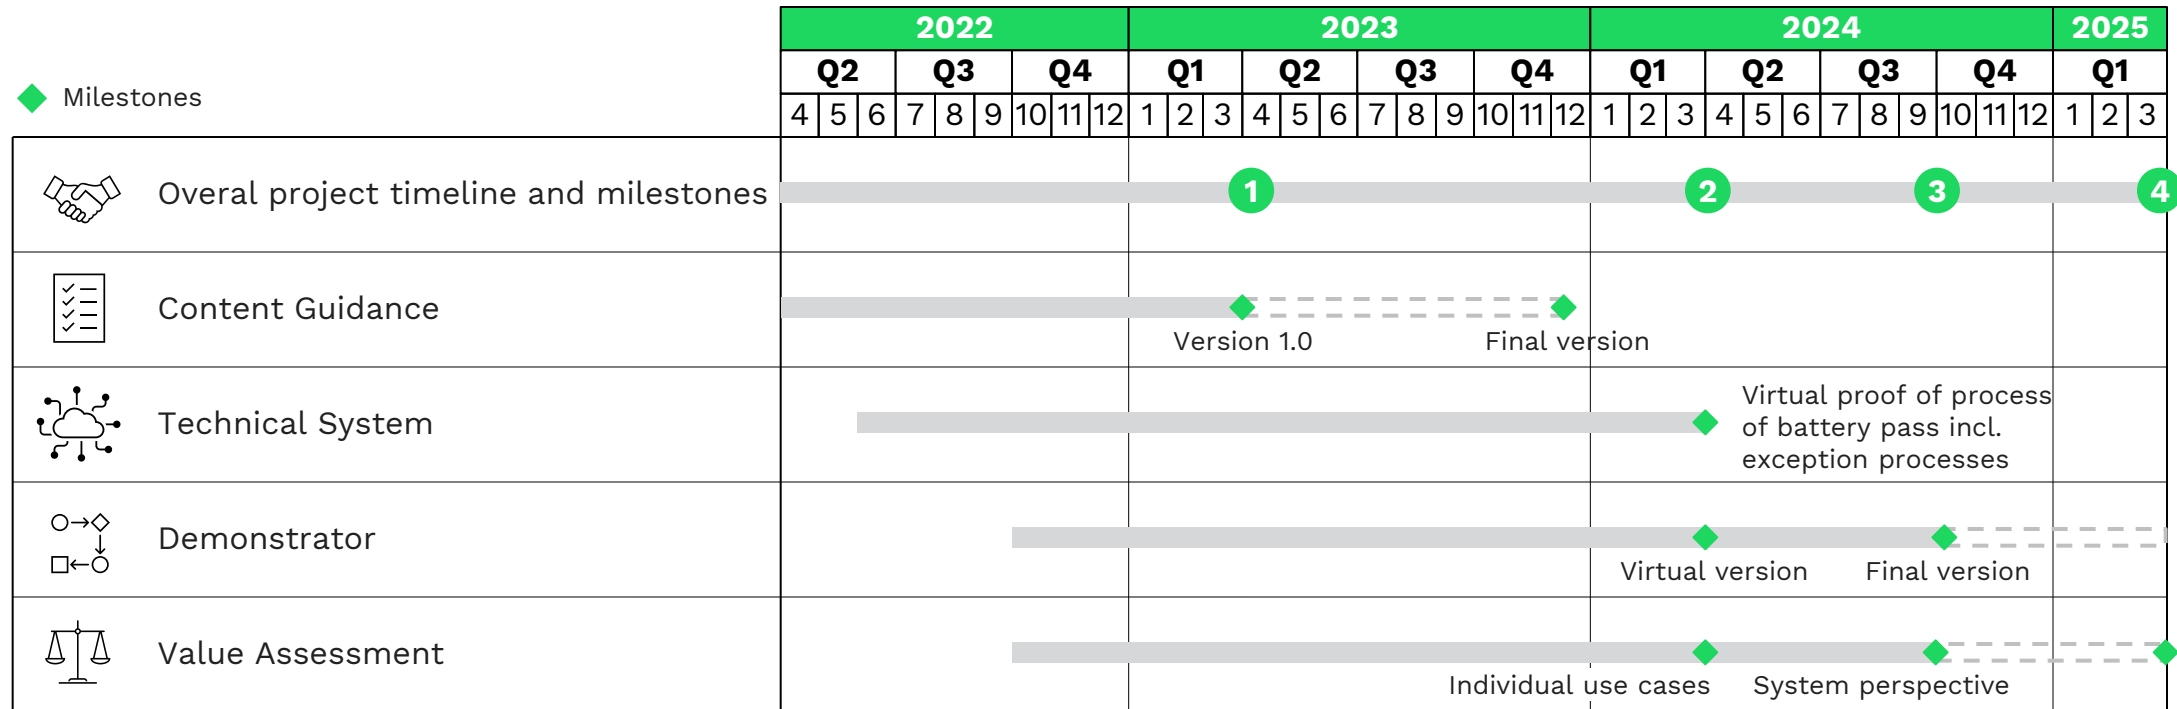

- Developing a comprehensive data ecosystem with standardized global data exchange for data-driven value chain in the automotive industry
- Based on GAIA-X data space technology to support data sovereignty with distributed data management and sophisticated identity and access management
- Focusing on several use cases including decarbonization and ESG reporting, circularity & battery passport and others

And many more...

The Battery Pass project runs 3 years: starting with content requirements, the technical system will be analysed, a demonstrator built, and a value assessment conducted

Value model discussed in community

- 1 Concept model for data and auditing 2 Technical system model 3 Demonstrator in use 4 Use case model and follow-up for implementation

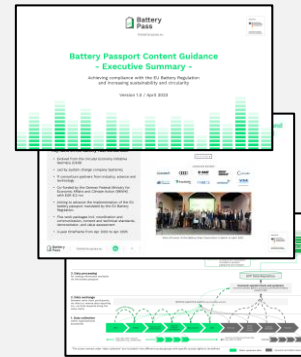

The Battery Pass reached its first milestone at Hannover Messe in April 2023 with the handover of its Battery Passport Content Guidance to State Secretary Kellner

Carbon Footprint EOL Analysis
PDF report

All documents available on the Battery Pass website

Sneak Peek: In a world's first detailed assessment of use cases of Battery Passports, we quantify several ways the system could add value

Micro perspective: Baseline procurement incl. technical testing costs for three different battery sourcing scenarios and reduction enabled by the battery passport

1. From acquired EOL batteries

2. Min refers to minimum testing costs with one temperature tested, max refers to maximum testing costs with three temperatures tested

Source: Systemiq analysis (2024) based on expert interviews and Global Sustainable Electricity Partnership (2021) see technical annex on slides 133-135 for main assumptions and their sources

Results of the Content Guidance have been building the foundation for further Battery Pass publications which will soon be released

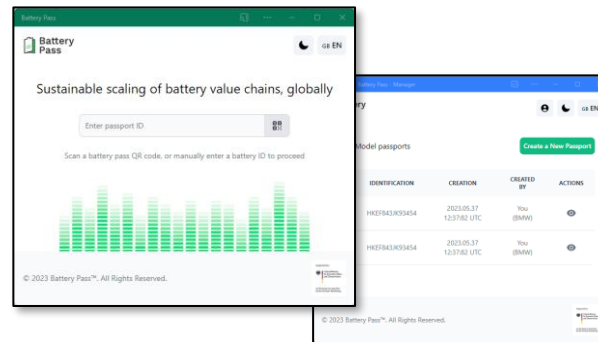

Technical Guidance

- Objective: provide an overview on how the technical battery passport system could look like and which required technical standards it must support
- Scope: Technical Standard Stack incl. mapping of existing standards as well as key challenges and recommendations

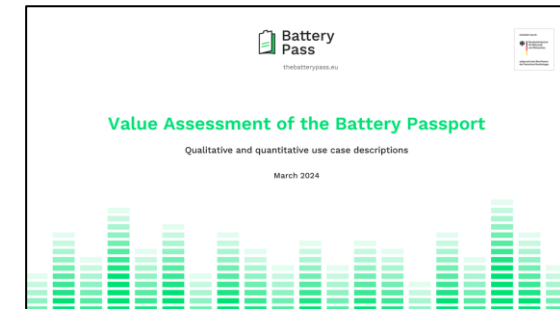

Demonstrator

- Objective: provide a platform which integrates results on battery passport data and system and verifies technological feasibility of the passport
- Scope: software prototype (TRL 5) covering exemplary real-world data

Value Assessment

- Objective: Provide an analytical study to motivate stakeholders to use the battery passport proactively and leverage its full potential.
- Scope: benefit modelling of individual use cases as well as the battery passport overall (incl. a qualitative-conceptual evaluation and exemplary quantification)

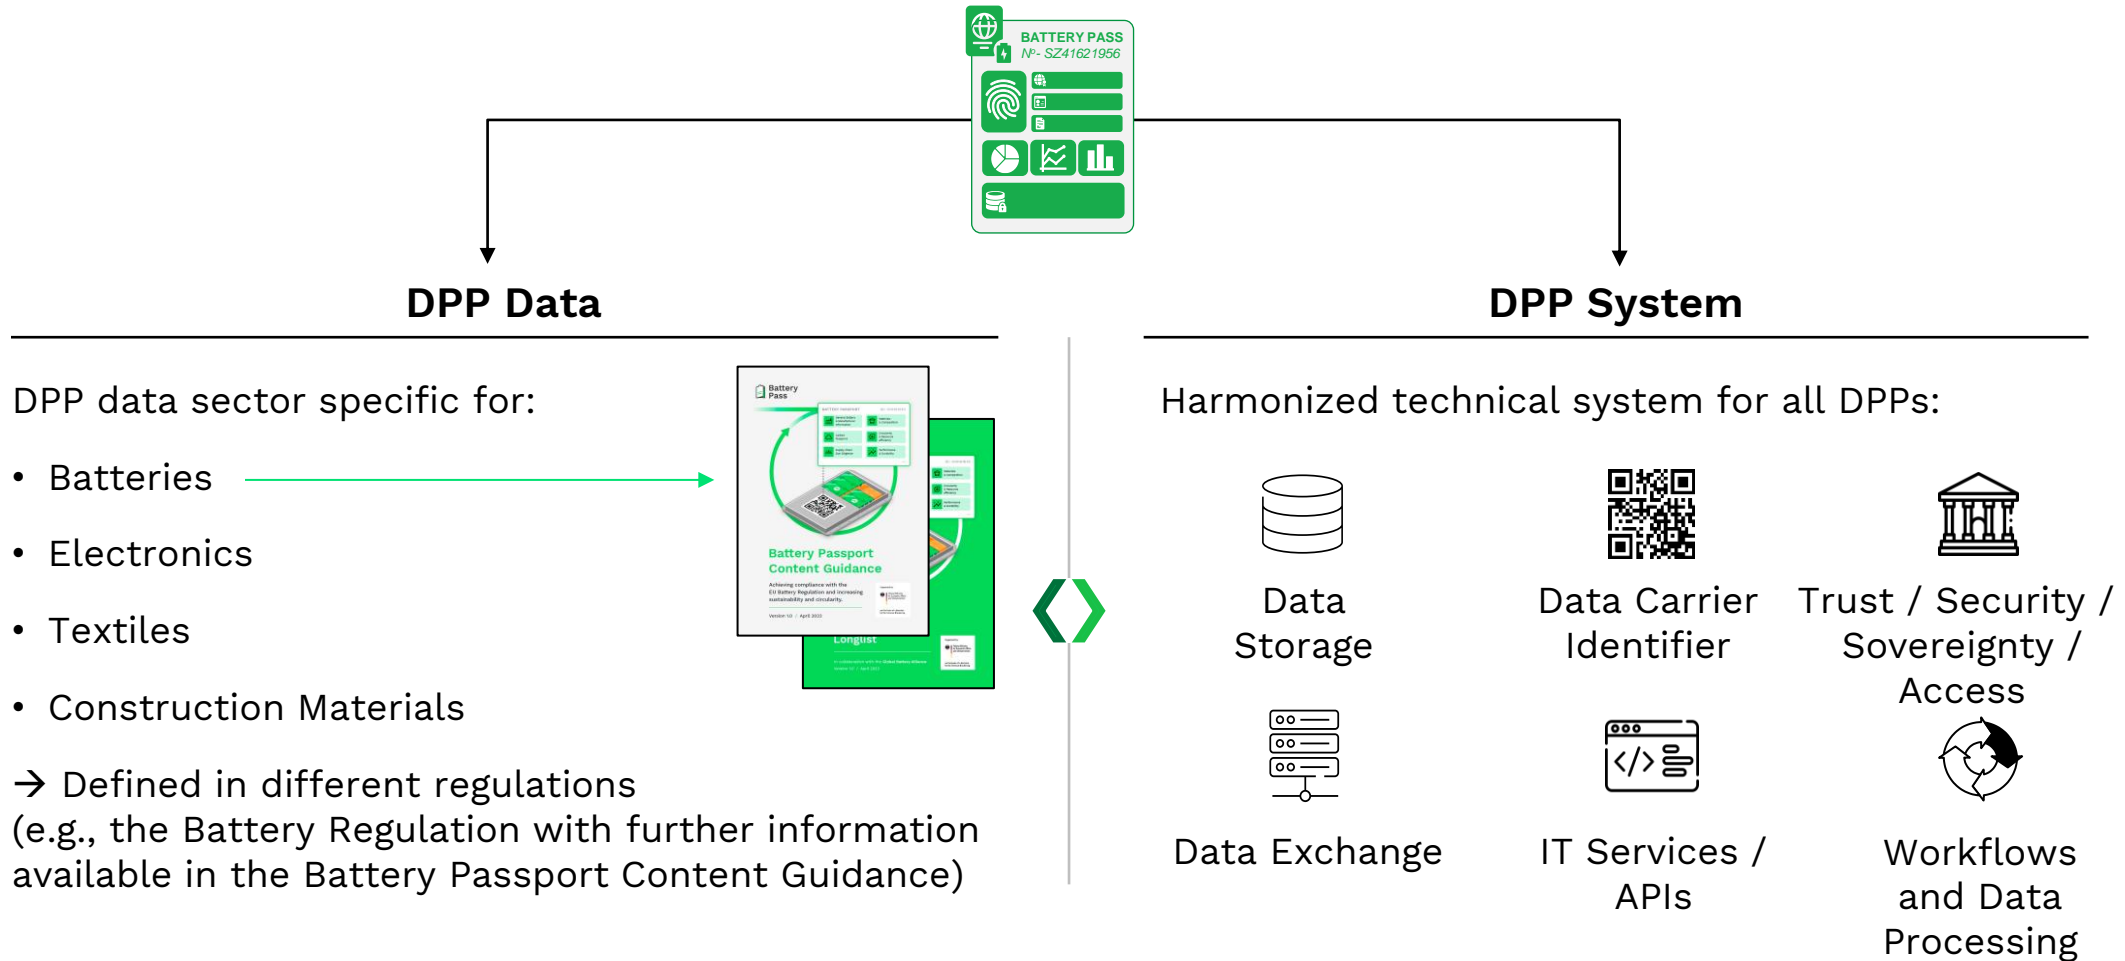

Launch at Hannover Fair April 22, via hand-over to State Secretary for Economy and Climate Action

The Digital Battery Passport System

Outlined by the Battery Pass Project

A digital product passport (DPP) consists of data and a system

A digital product passport (DPP) is a novel concept making available comprehensive lifecycle information of a physical product in digital format

Core elements and functioning of the battery passport system

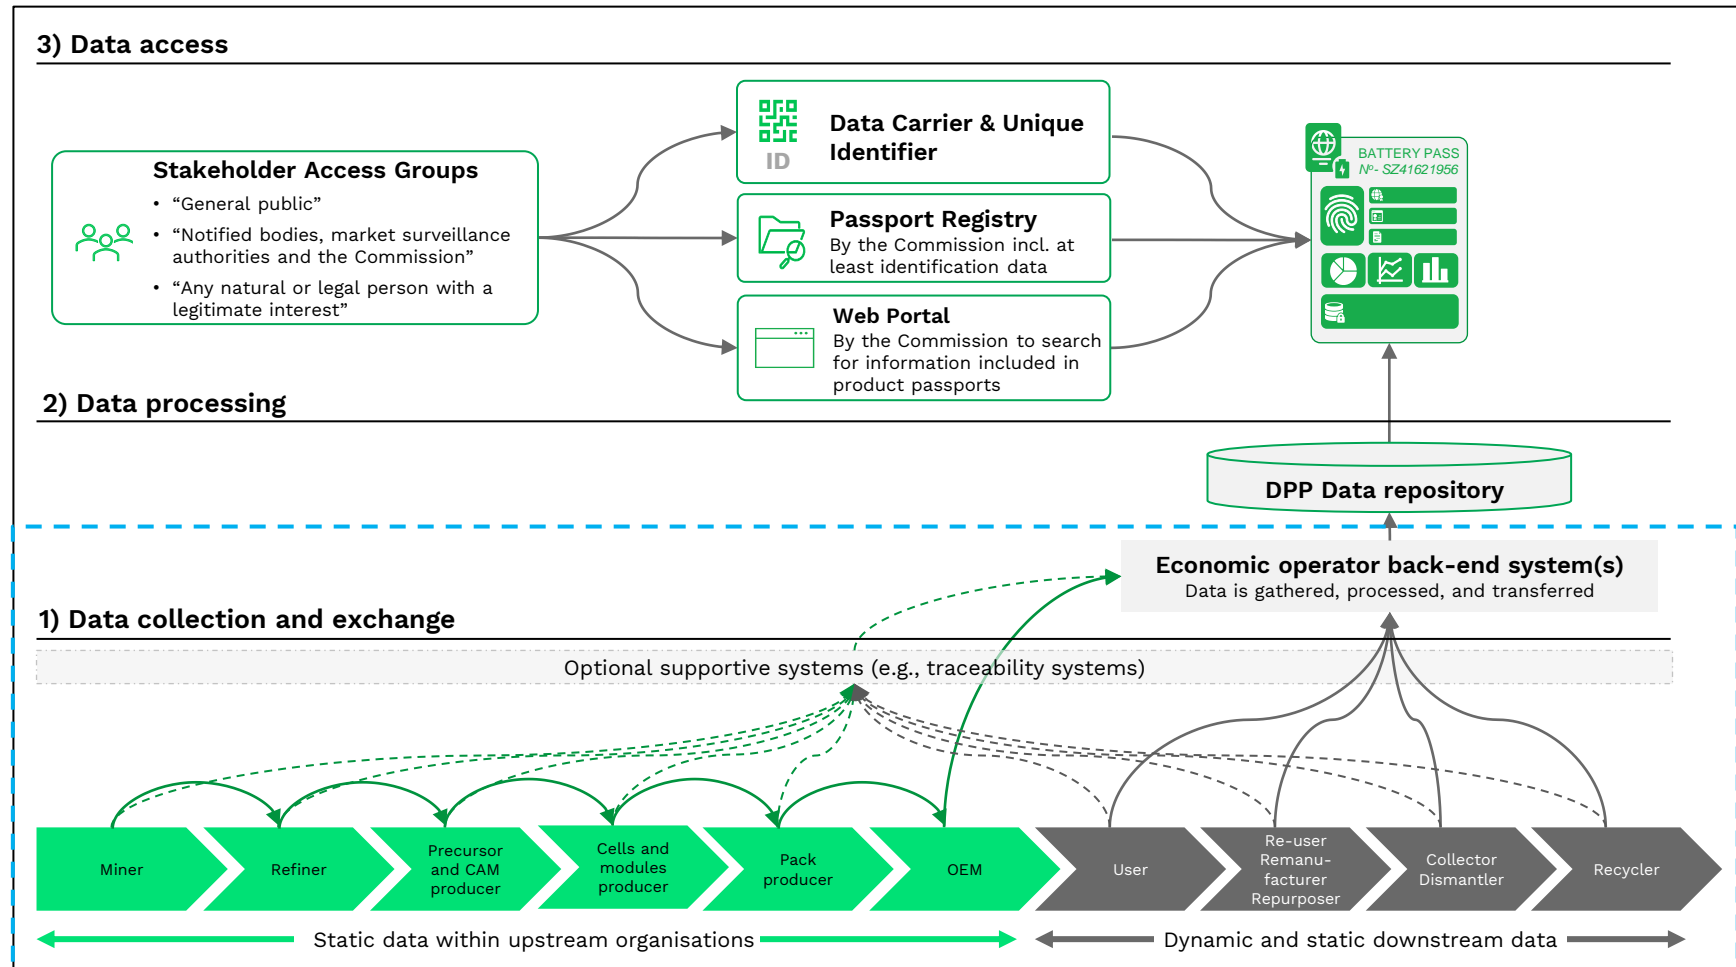

DPP definition

The European Commission defines a digital product passport (DPP) as:

“A structured collection of product related data with predefined scope and agreed data ownership and access rights conveyed through a unique identifier.¹⁾”

DPP functioning

- 1) Data is collected within organizations and exchanged between value chain players
- 2) Data is gathered, processed and transferred for product passport by the economic operator
- 3) Data is accessed from product passport by pre-defined groups based on respective access rights

Not specified by regulatory DPP system requirements, but under the responsibility of the economic operators.

Overview on regulatory references by passport system process steps

Regulatory references (ESPR and Battery Regulation)

1 Data collection and exchange	The responsibility for collecting and processing this battery passport information lies with the economic operator placing the battery on the market (Battery Regulation, Article 77(4)).	While the regulation requires an interoperable data exchange network “without vender lock-in” (Battery Regulation, Article 77(5)) for battery passport data provision, the technology of data collection and processing is not further specified.	
2 Data processing	The battery passport should be based on a decentralized data system , set up and maintained by economic operators (ESPR (6), Recital 32; Battery Regulation, Recital 126).	Economic operators can authorise other operators to act on their behalf and store the data being accessible via the battery passport (ESPR (6), Article 10(c)).	
3 Data access	<u>Product passport registry:</u> The European Commission will also aggregate and store selected data of the battery passport in the product passport registry . This registry, to be set up and maintained by the Commission, should be accessible to competent national authorities, customs authorities, and the Commission itself (ESPR (6), Recital 32, Article 12). The responsibility for uploading the required information to the registry lies with the economic operator placing the product on the market or putting it into service (ESPR, Article 12).	<u>Data carrier:</u> Access to DPPs shall be provided via a data carrier (ESPR (6), Recital 31), defined as a “linear bar code symbol, a two-dimensional symbol or other automatic identification data capture medium that can be read by a device” (ESPR (6), Article 2(30)). For the battery passport, this data carrier shall be a QR code (Battery Regulation, Article 77(3)), whereas delegated acts can be adopted by the European Commission to “provide for alternative types of smart labels instead of or in addition to the QR code, in view of technical and scientific progress” (Battery Regulation, Article 13(6, 8)).	<u>Stakeholder groups:</u> (Article 77(2), Battery Regulation) <ul style="list-style-type: none">• “General public” (Recital 123)• “Notified bodies, market surveillance authorities and the Commission” (Recital 123)• Any natural or legal person with a legitimate interest in accessing and processing that information” (Annex XIII (2 and 4))

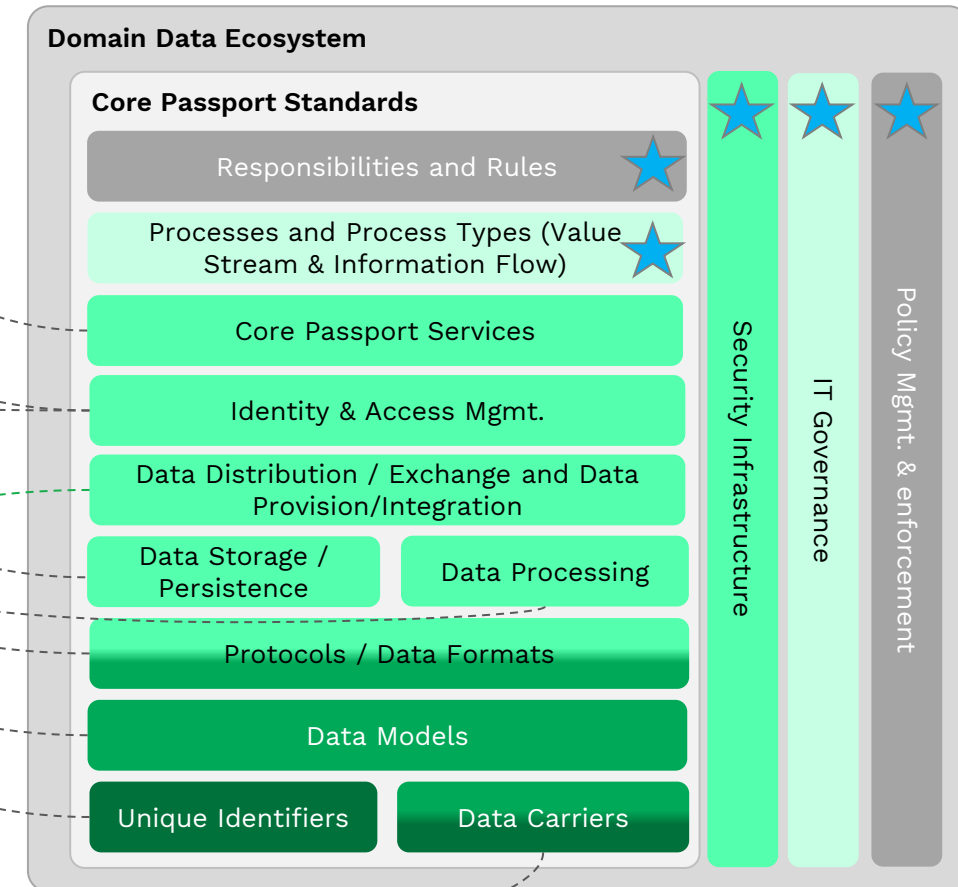

The Standard Stack contributes to the elaboration of harmonised Standards to implement the ESPR

Will be subject of upcoming directives, but have to be linked to the standards

Current standardisation request harmonised standard(s) on:

- APIs for the DPP lifecycle management and searchability
- Access rights management, information, system security, and business confidentiality
- Data authentication, reliability, integrity
- Data storage, archiving, and data persistence
- Data processing, data exchange protocols and data formats
- Interoperability
- Unique identifiers
- Data carriers and links between physical product and digital representation

Via a top-down approach an initial longlist of standards for each element of the Technical Standard Stack has been identified and evaluated afterwards

Standards origin and hierarchy

Standard setters

5

Associations

Evaluation criteria

Cross-sector suitability

Open, non-proprietary and independent of specific technical implementation

Co-existence of standards

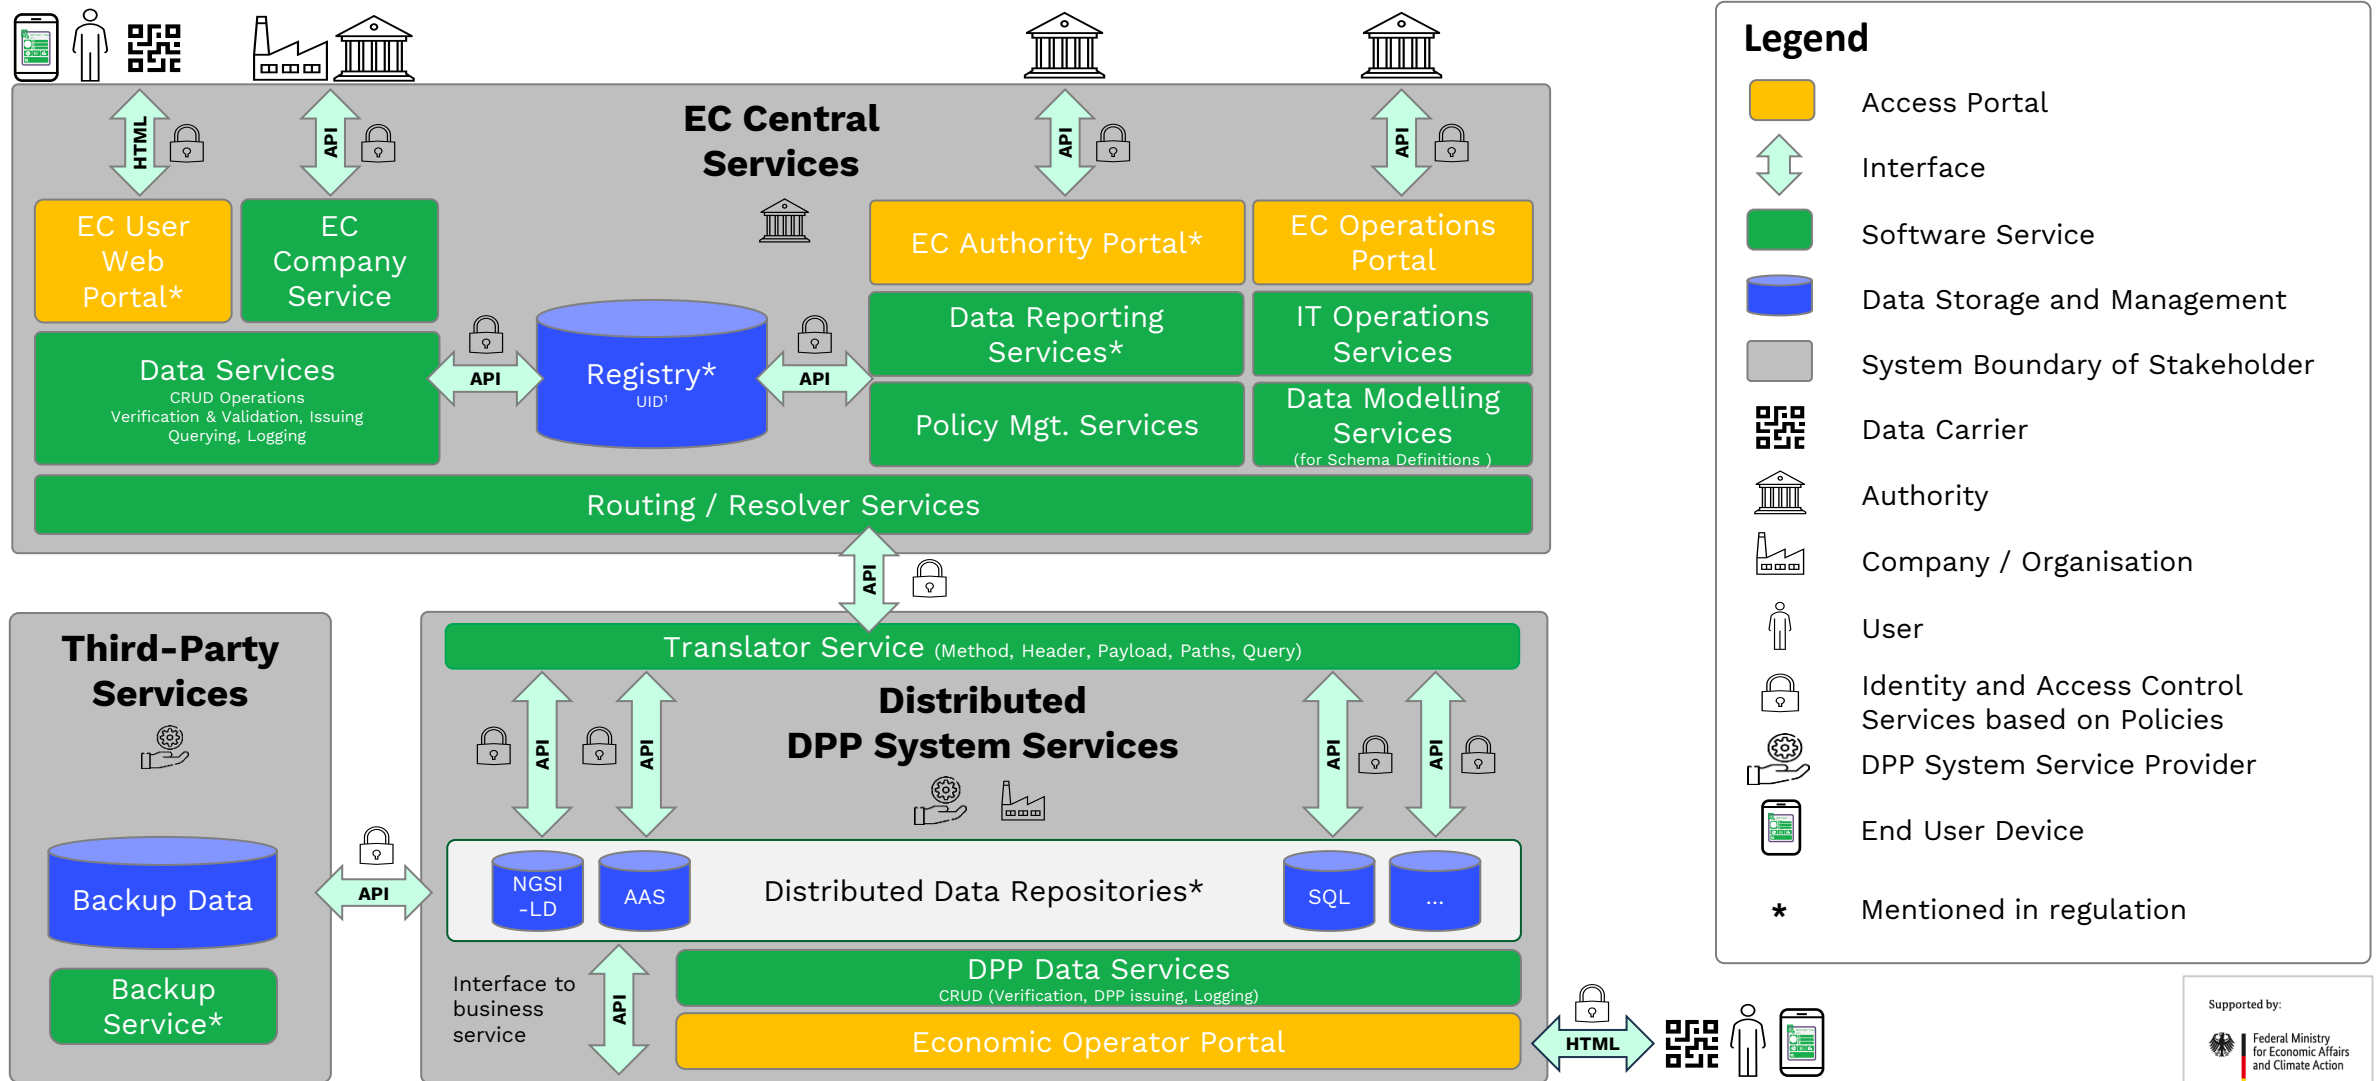

Consideration of requirements of all stakeholders

→ Existing mature international standards

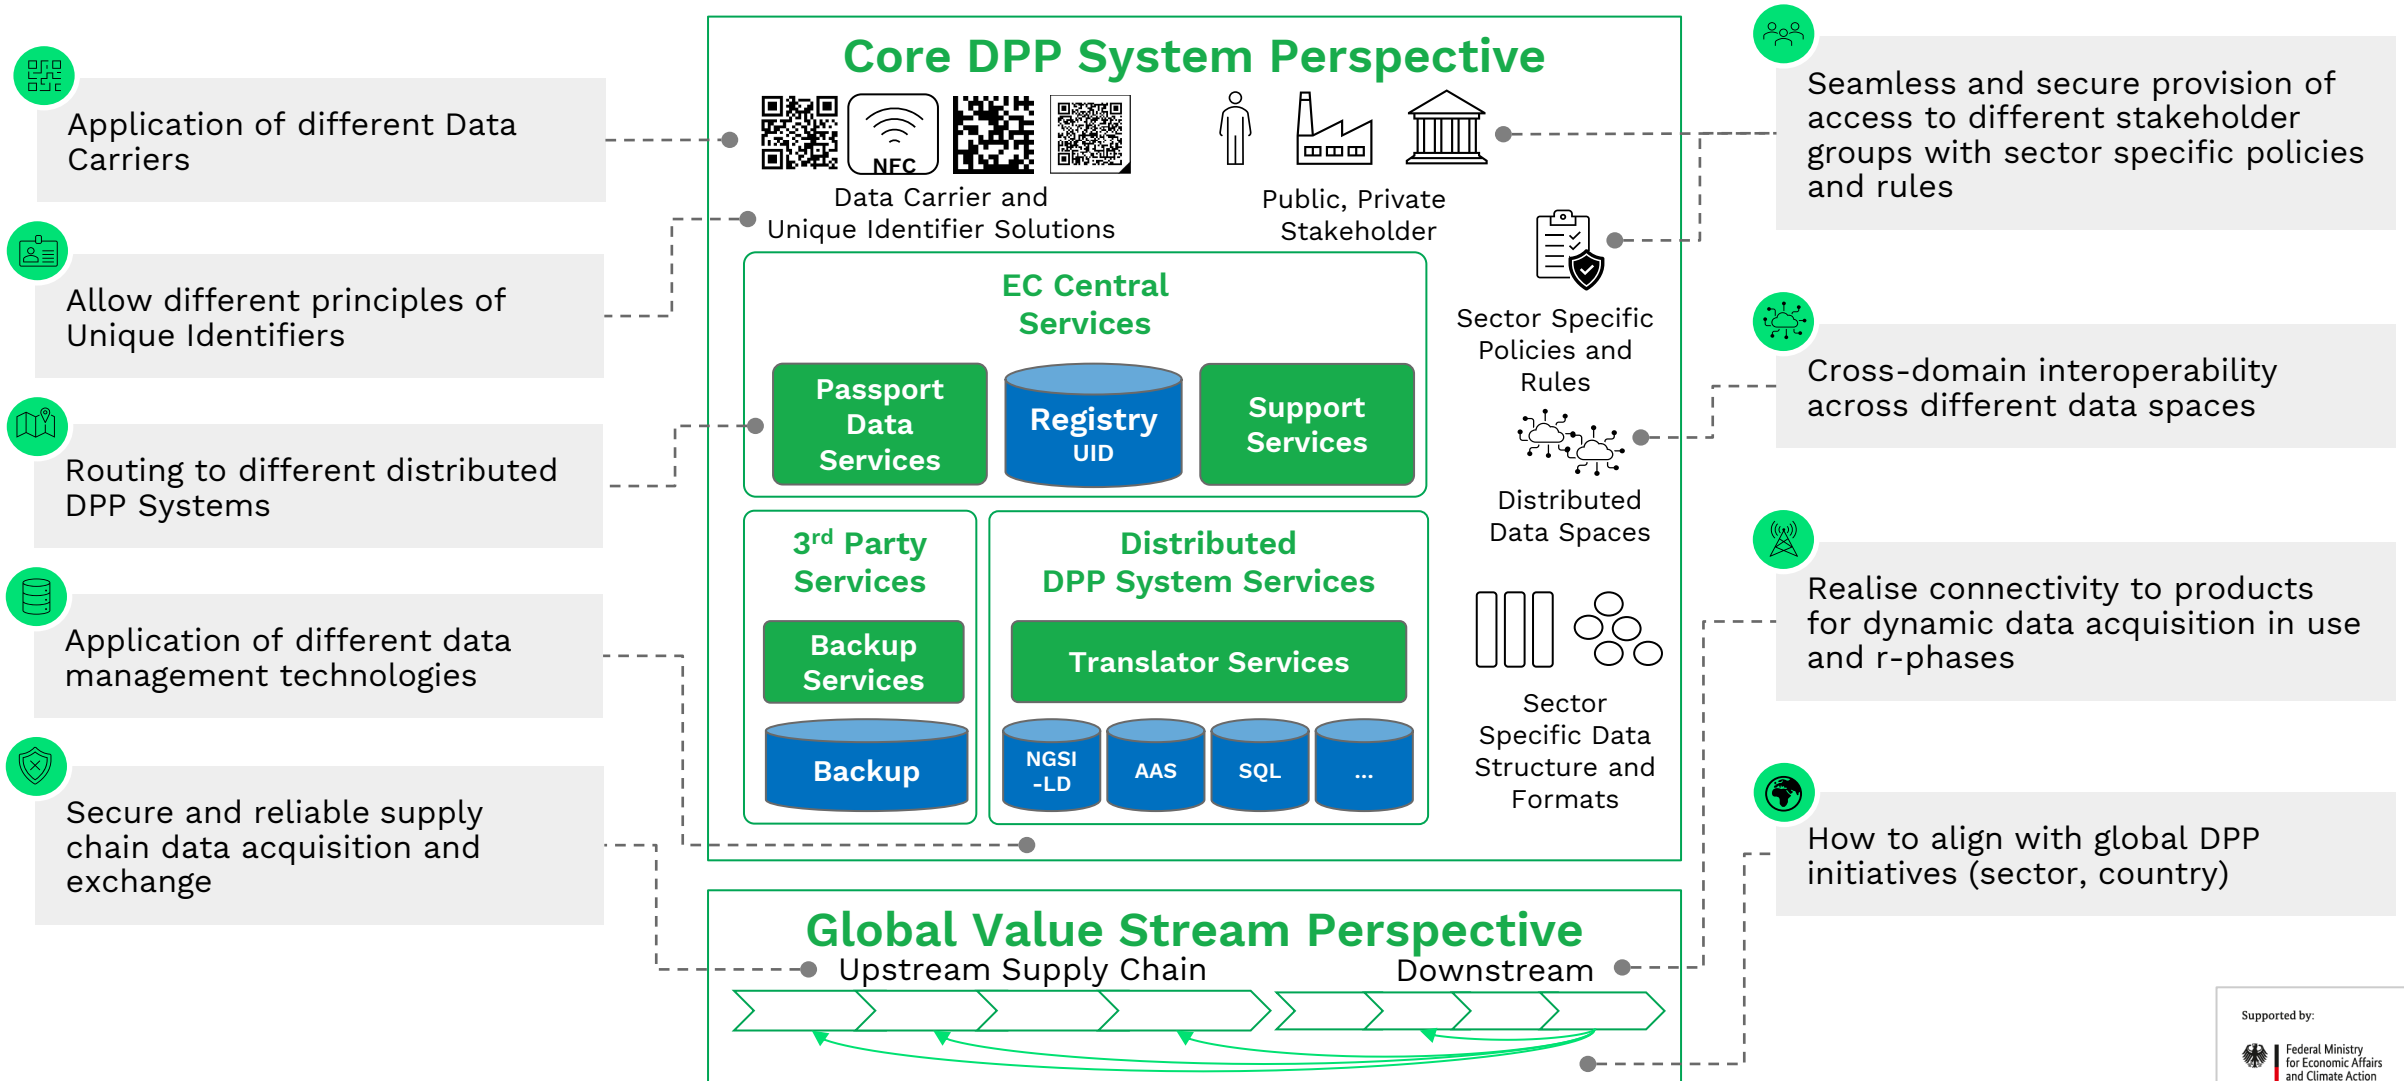

→ New and innovative approaches

... according to the standardisation request

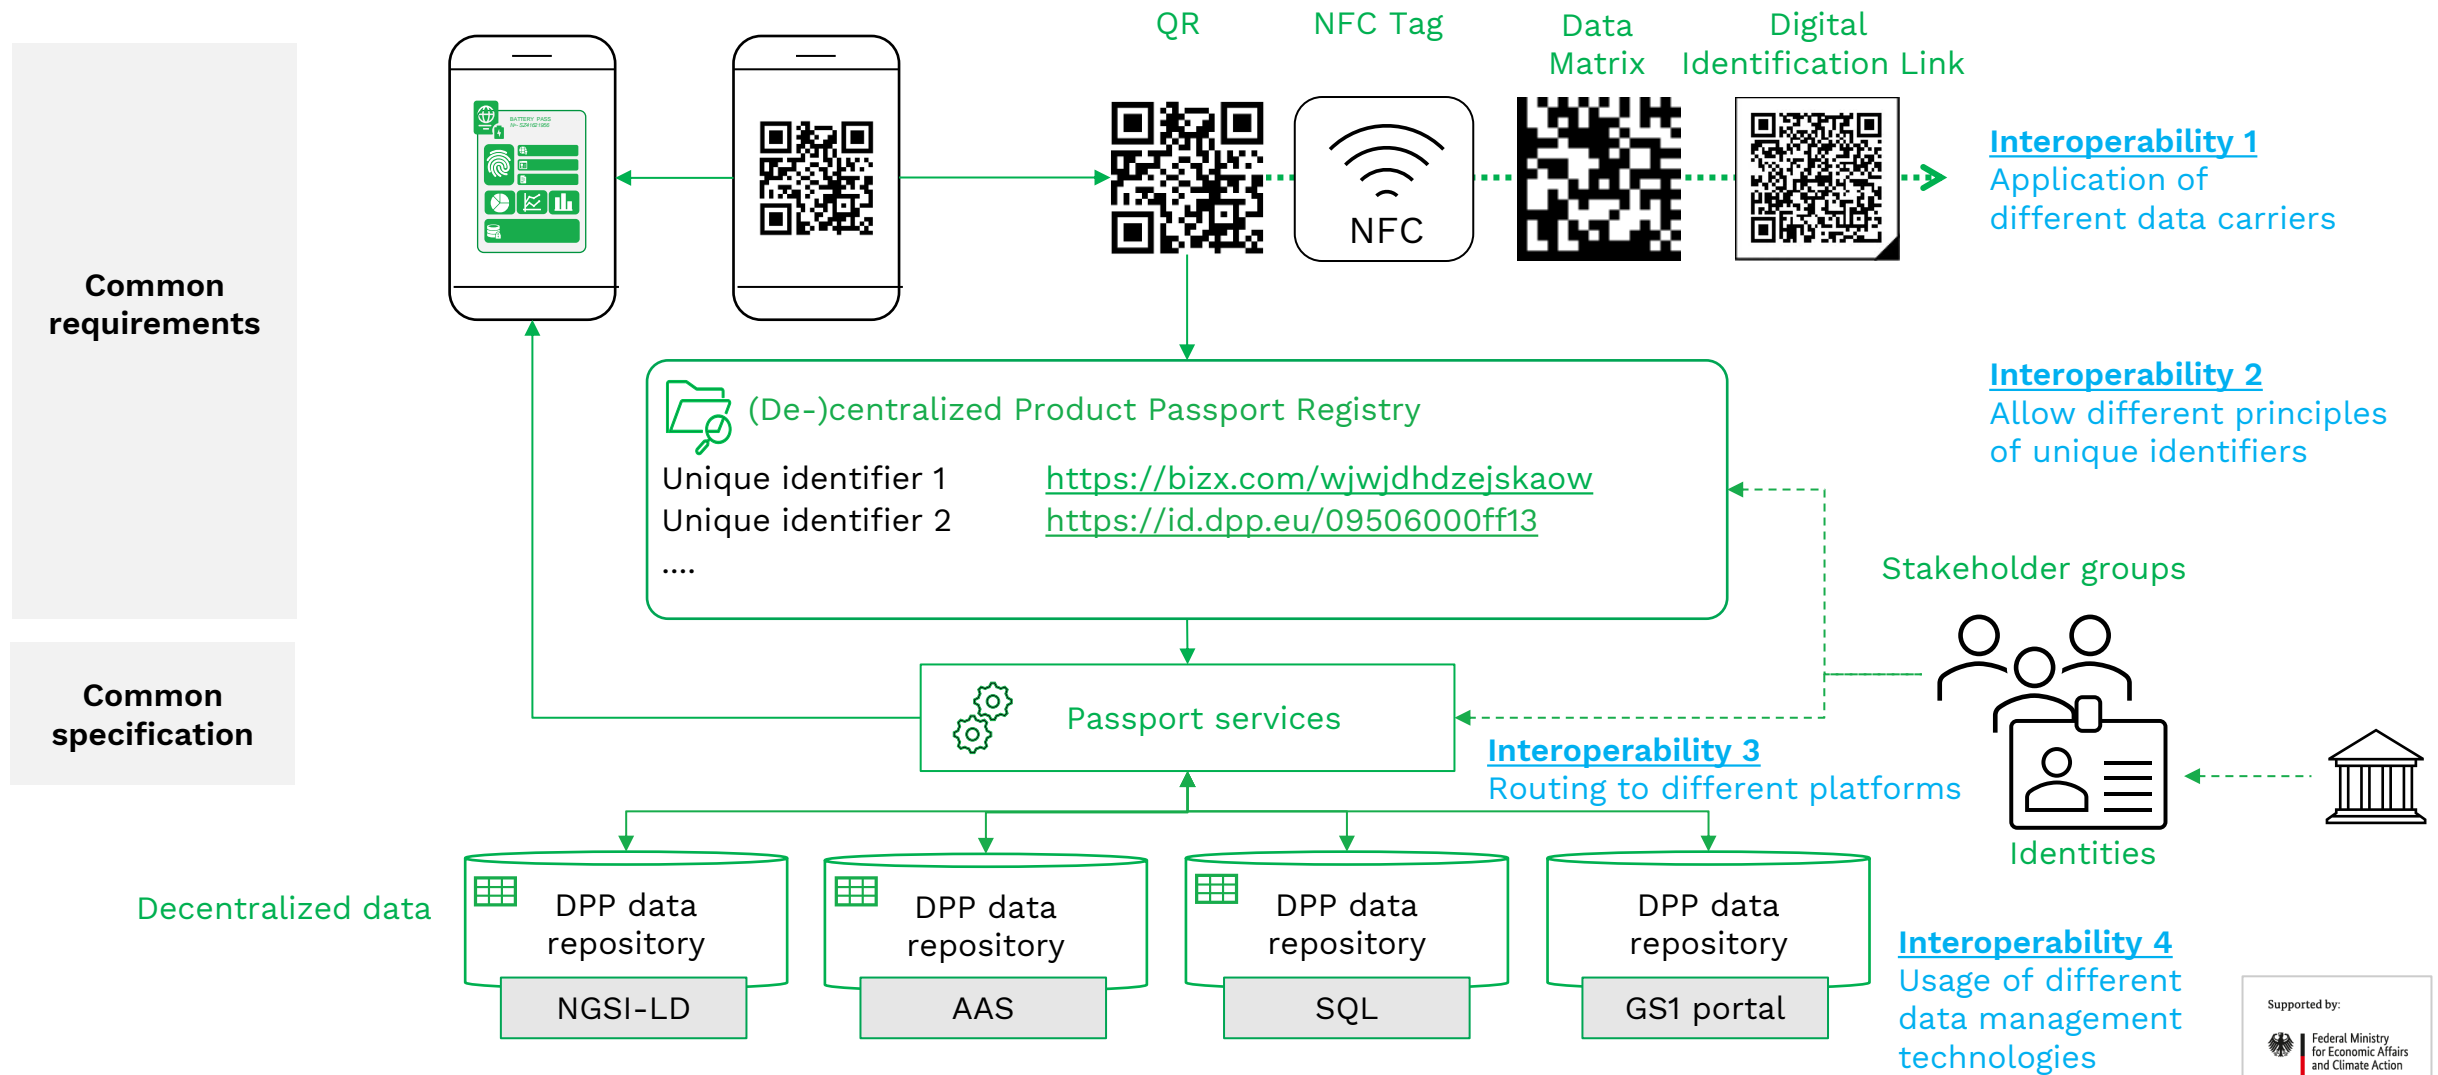

A variety of building blocks beyond the regulation are needed for an operational system

A variety of interoperability challenges need to be solved

The interoperability requirements are numerous – a selection

Why common data models are important for interoperability

One DPP system applicable for different product sectors in the future

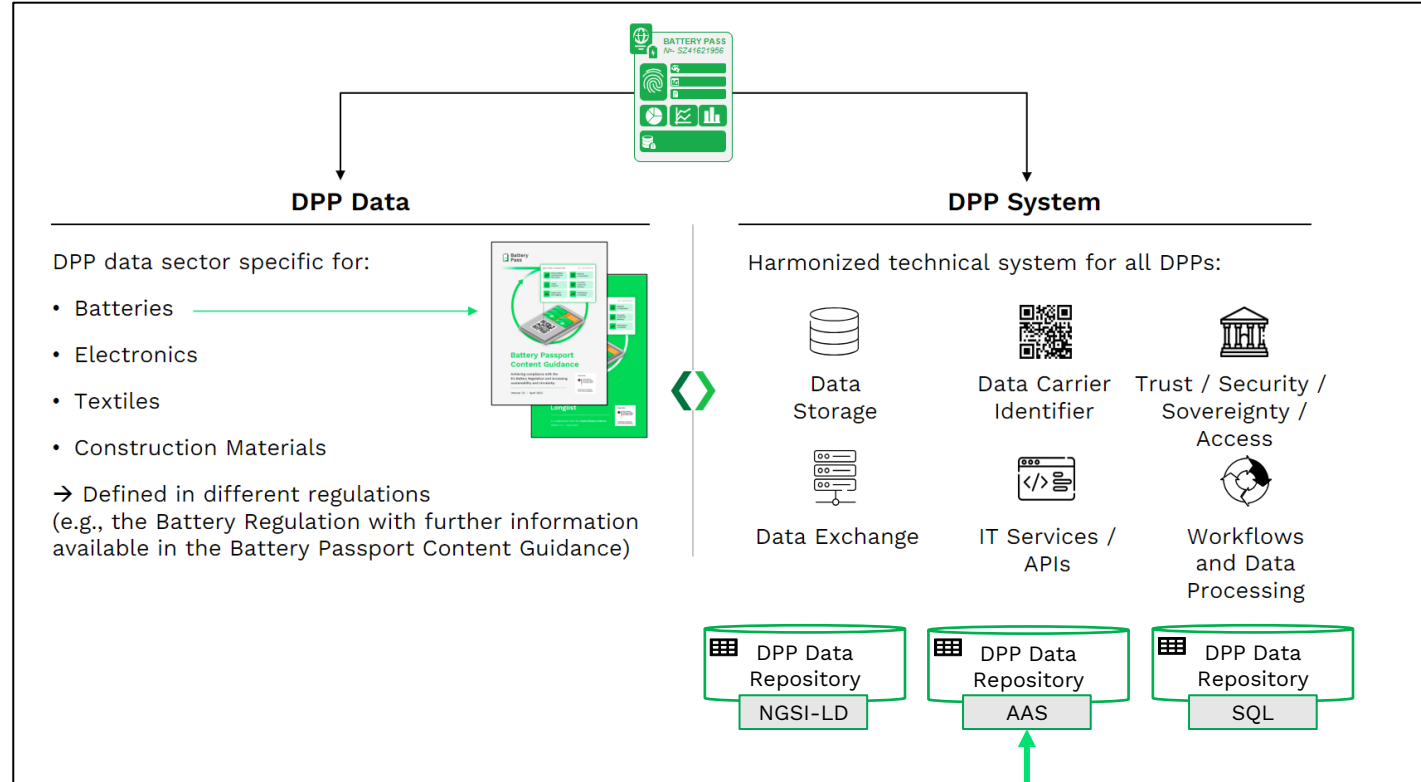

Technical Standard Stack

- Data models
- Data distribution / exchange and data provision/ integration
- Protocols / data formats

Regulatory requirements

The product passports should be as uniform as possible across products, industry sectors and relevant EU legislations (standardisation request based on ESPR)

Seamless data exchange between product sector specific DPP

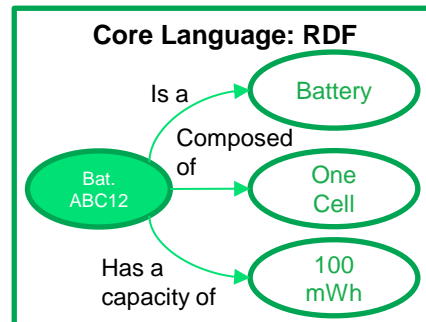

(Semi-) Automatic sector specific data mapping of DPP system

(Re-) Use existing implementation standards and solutions

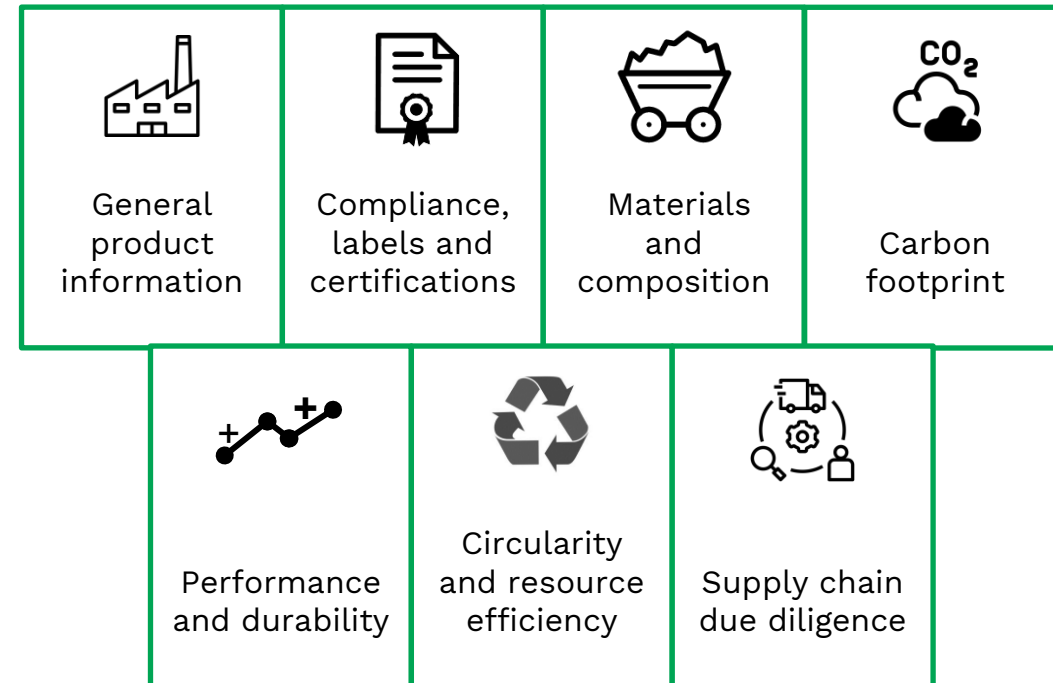

Data points are mapped into interoperable semantic models based on RDF

Standardised common meta model based on RDF, defining core data model elements (e.g., entities, properties, data types, physical units, etc.)

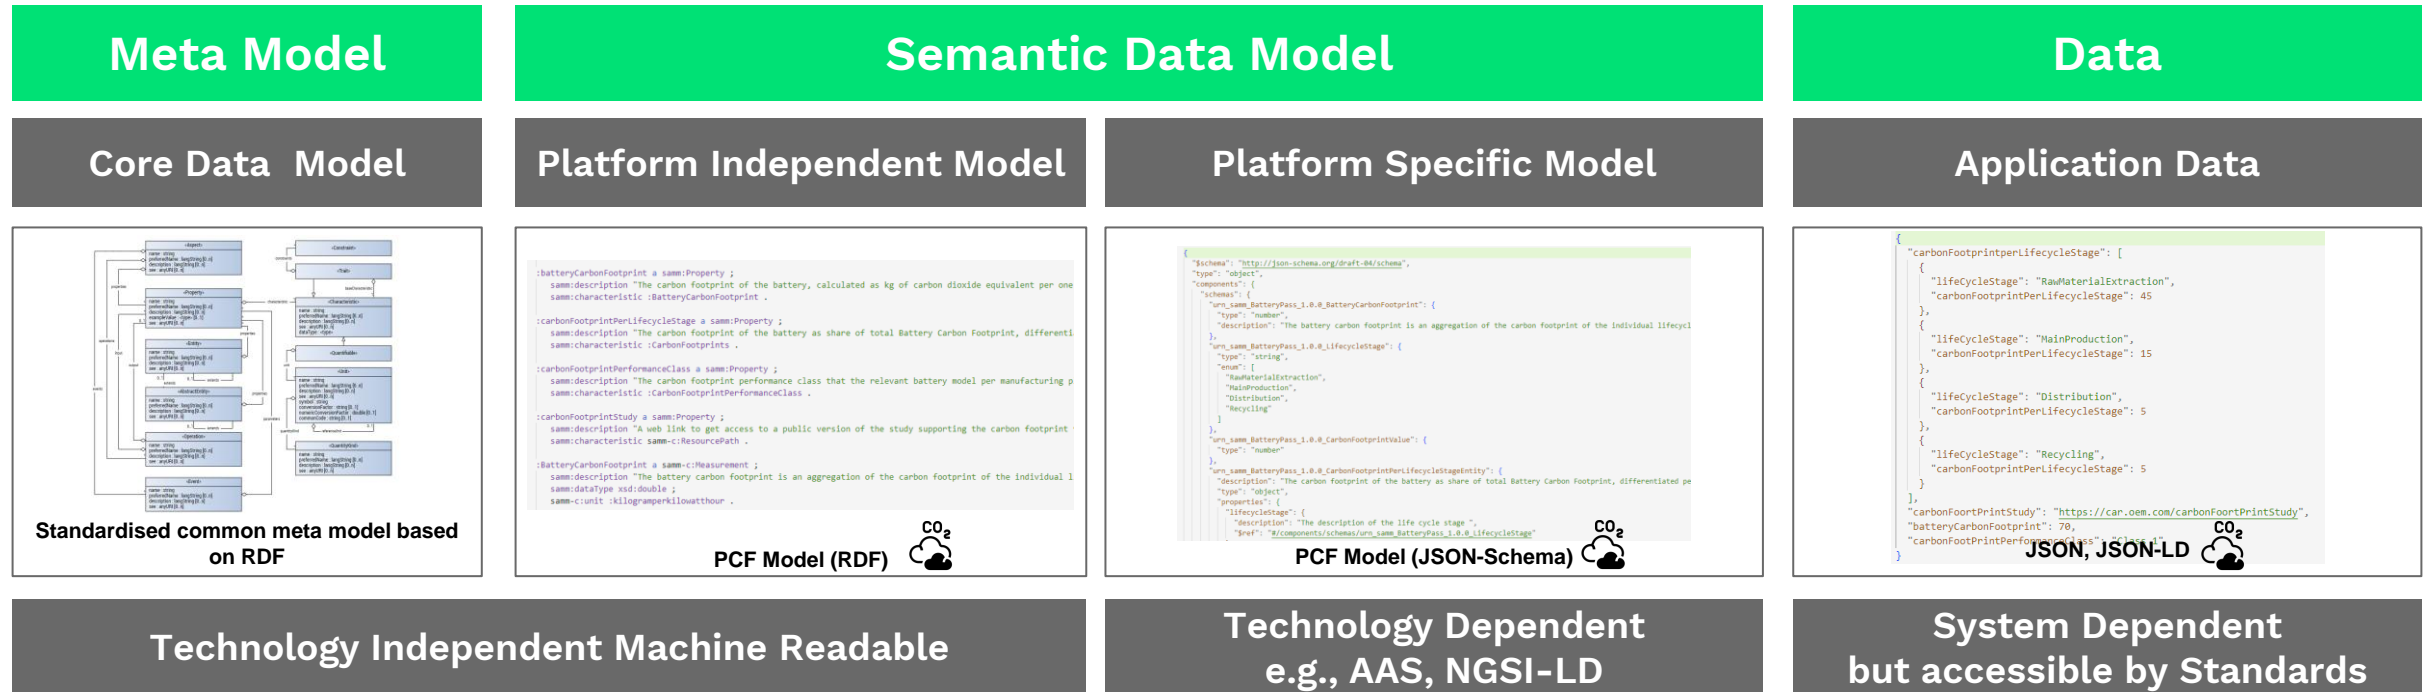

Product-agnostic semantic data models to compose the battery passport data model

- Extensibility for individual data and updated legislative requirements
- Technology agnostic application in other sectors

How DPP Data is represented and transformed in a DPP System

(Semi) – Automatic Transformation

- Description without implementation technology dependency
- Open technology progress at implementation level
- Less time and effort for data updates

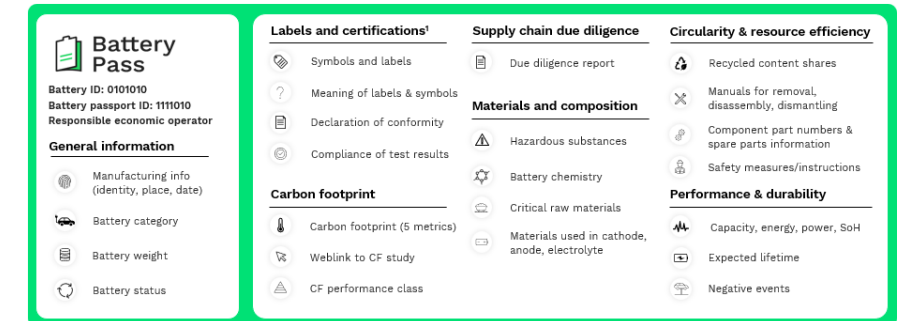

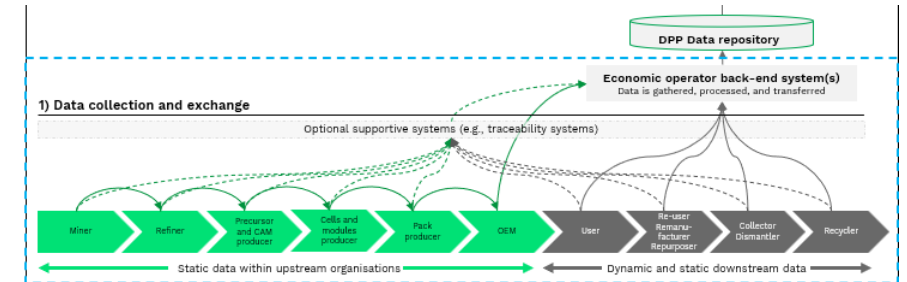

The Battery Pass Demonstrator

Pilot implementation of a mean viable Battery Passport System

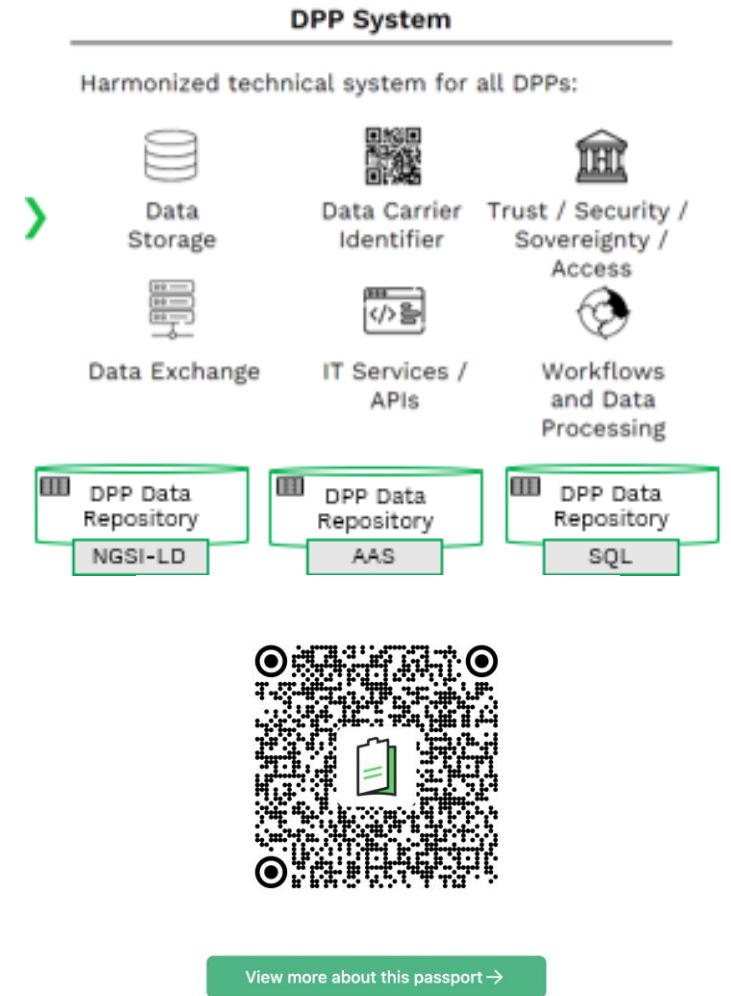

Covered user stories / functions in the Battery Passport Demonstrator

- Collect and process data for the Battery Passport from economic operator back-end systems
 - Collect data from backend systems
 - Map data to common battery pass data model
 - Manage Battery Passport in Economic Operator local Battery Passport Data Repository
- Issue a Battery Passport
 - Create unique Battery Pass Identification based on URN notation scheme, which allows multiple identification standard adoption e.g. DID

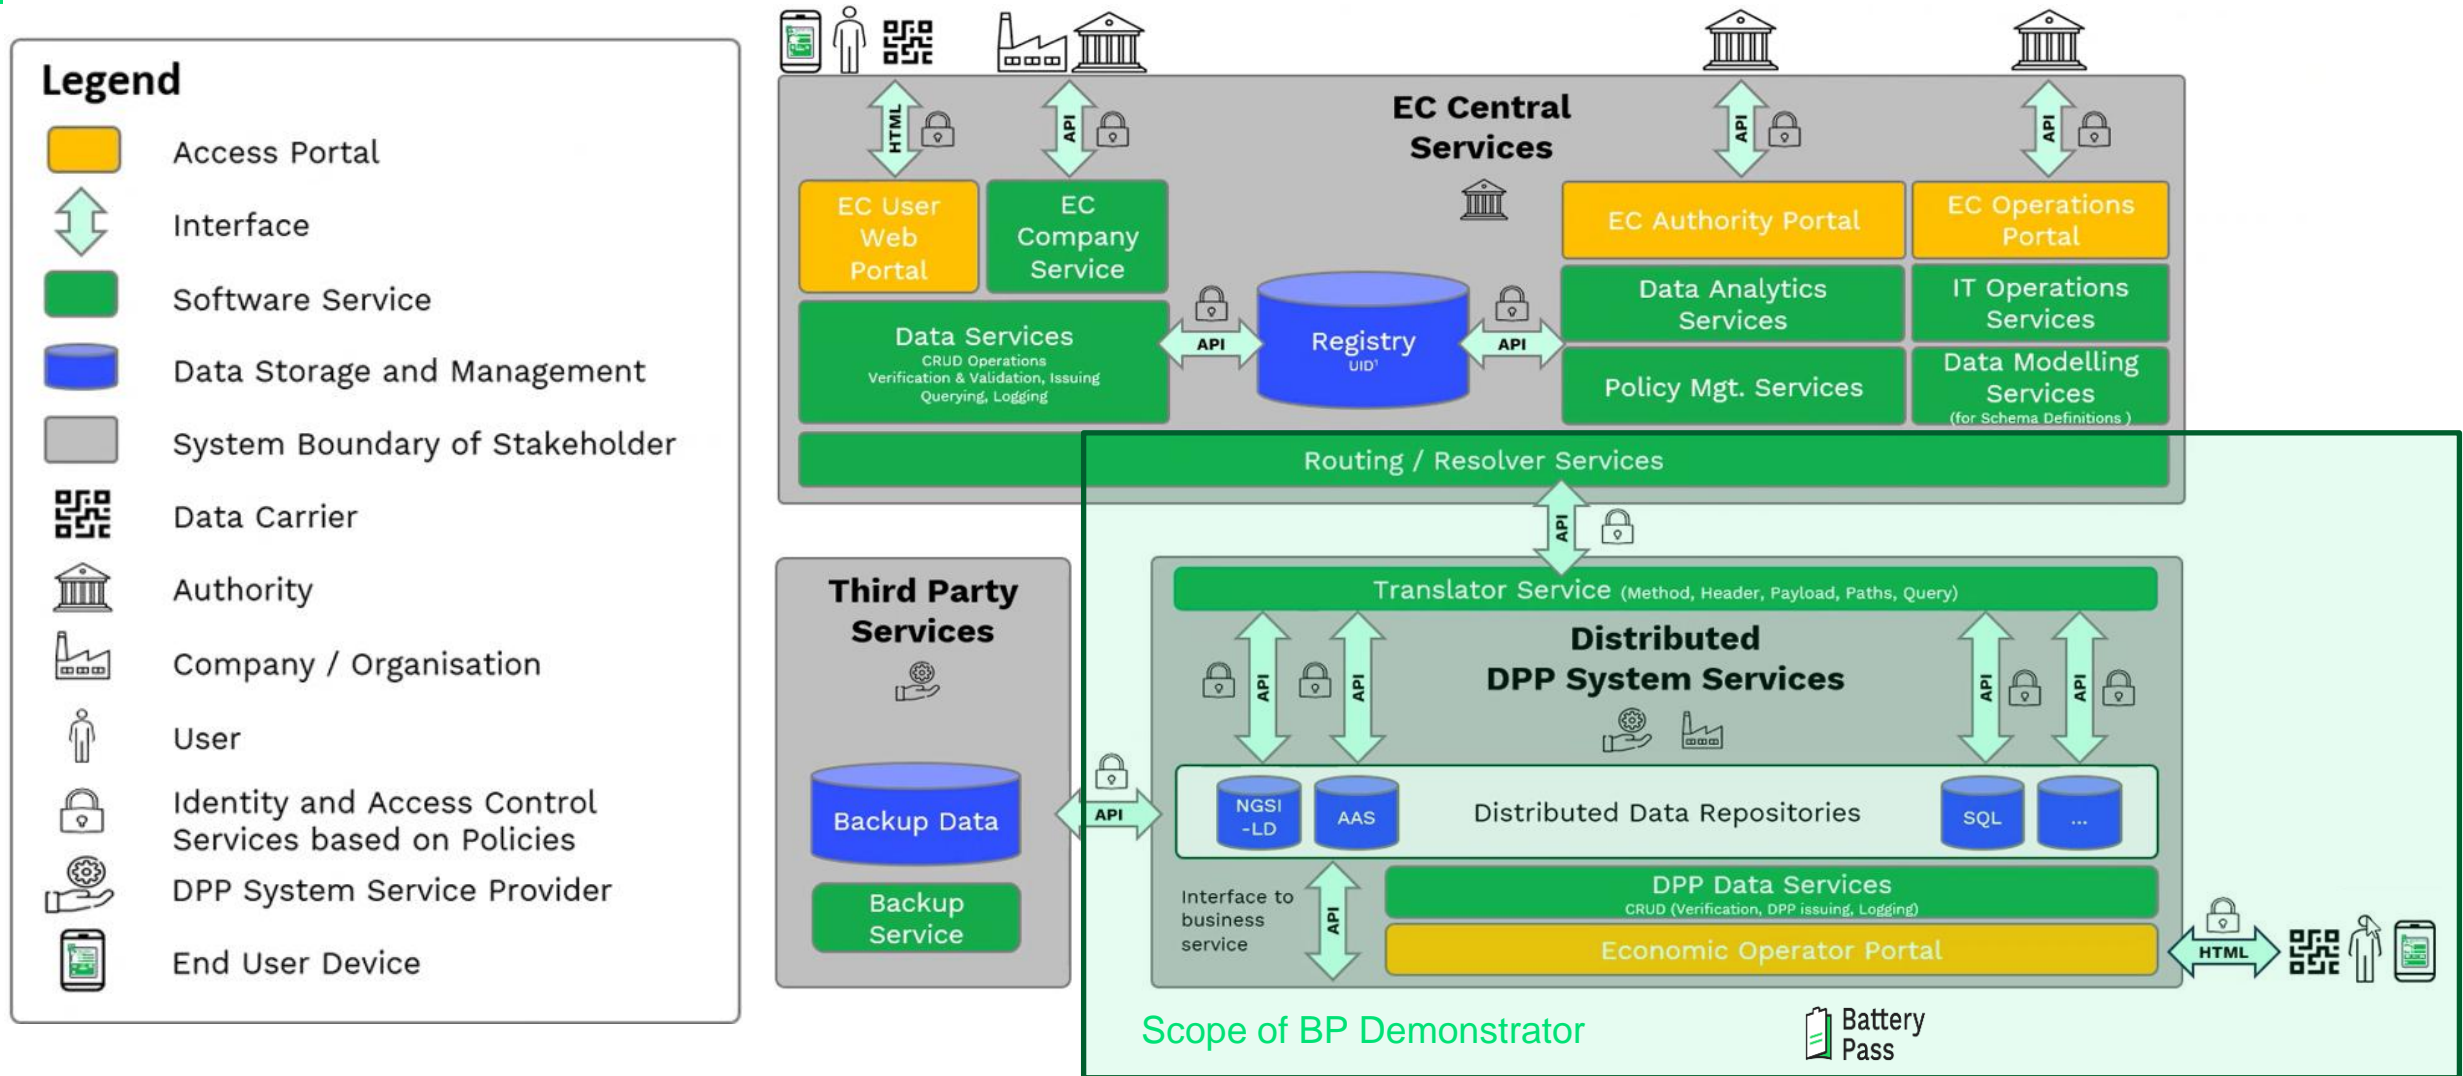

Covered user stories / functions in the Battery Passport Demonstrator

- Distributed management of Battery Passport data at each Economic Operator
 - Common access to Battery Pass through Battery Passport IDs via resolver mechanism in central registry
 - Verify different data representation based on common semantic model (NoSQL, NGSI-LD, AAS) for verification of technology-open implementation approach
- Accessing and viewing of Battery Passport
 - Scan QR Code or enter Battery Passport ID
 - Access to public/restricted Battery Passport Data without/with authorisation

Scope of BP Demonstrator in DPP-System Architecture

Battery Pass Demonstrator Implementation

- Minimum viable Battery Passport System
 - Cloud-based infrastructure for distributed management
 - Currently Multiple instances of Battery Passport Data Repository (BPDR) have been setup to mimic a Battery Ecosystem with multiple Economic Operators
 - Economic operator portal with a dedicated URL for each EO
 - Access protected with additional authorization
 - Common API providing CRUD operations on BPDR
- Battery Passport Manager
 - Management tool for managing a local Battery Passports in Data Repository
 - Collect data from external source or from existing model passport
 - Store Battery Passport in EO specific BPDR
 - Publish Battery Passport via central registry
